## DETAILED ACTION

### ***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Beatty et al, US Patent 6,692,249 B1.

Beatty et al teaches a thermal treatment system that includes an outer tube 12 made of silicon carbide that has a closed upper portion; an open lower portion; and a flange formed on an outer peripheral side of the lower portion. The lower portion has a tapered portion so as to expand a diameter thereof toward the lower end. (See figures 1-3) For clarity the Examiner has attached a blown up portion of figure 2, which is similar to figures 1 and 3.

Beatty et al differs from the present invention in that Beatty et al does not teach specific dimensions of the outer tube (i.e. size, ratios of different parts, radii of curvature, surface roughness, etc).

The optimization of the dimensions of an apparatus is a fundamental engineering skill and is part of applying the disclosures of patents, which rarely give specific dimensions. Furthermore, it was held in *Gardner v. TEC Systems, Inc.*, 725 F.2d 1338, 220 USPQ 777 (Fed. Cir. 1984), cert. denied, 469 U.S. 830, 225 USPQ 232 (1984), by the Federal Circuit that, where the only difference between the prior art and the claims

Art Unit: 1763

was a recitation of relative dimensions of the claimed device and a device having the claimed relative dimensions would not perform differently than the prior art device, the claimed device was not patentably distinct from the prior art device. (Also see MPEP 2144.04 (d))

The motivation for optimizing the dimensions of Beatty et al is to optimize the performance of the apparatus for the desired size substrate.

Therefore it would have been obvious to one of ordinary skill in the art at the time the invention was made to optimize the dimensions of Beatty.

### **Conclusion**

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The cited art teaches the technological background of the

Art Unit: 1763

invention. The cited art contains patents that could be used to reject the claims under 35 USC § 103. These rejections have not been made because they do not provide any additional or different teachings, and if they were applied, would have resulted in an undue multiplication or references. (See MPEP 707.07(g)) Yamaga et al, US Patent 5,578,132 (figure 11) and Ahlgren, US Patent 4,985,281 could be used to make rejections similar to the rejection under Beatty et al.
